**More than 60,000 workplaces around
the world run on Humanity!**

How it Works

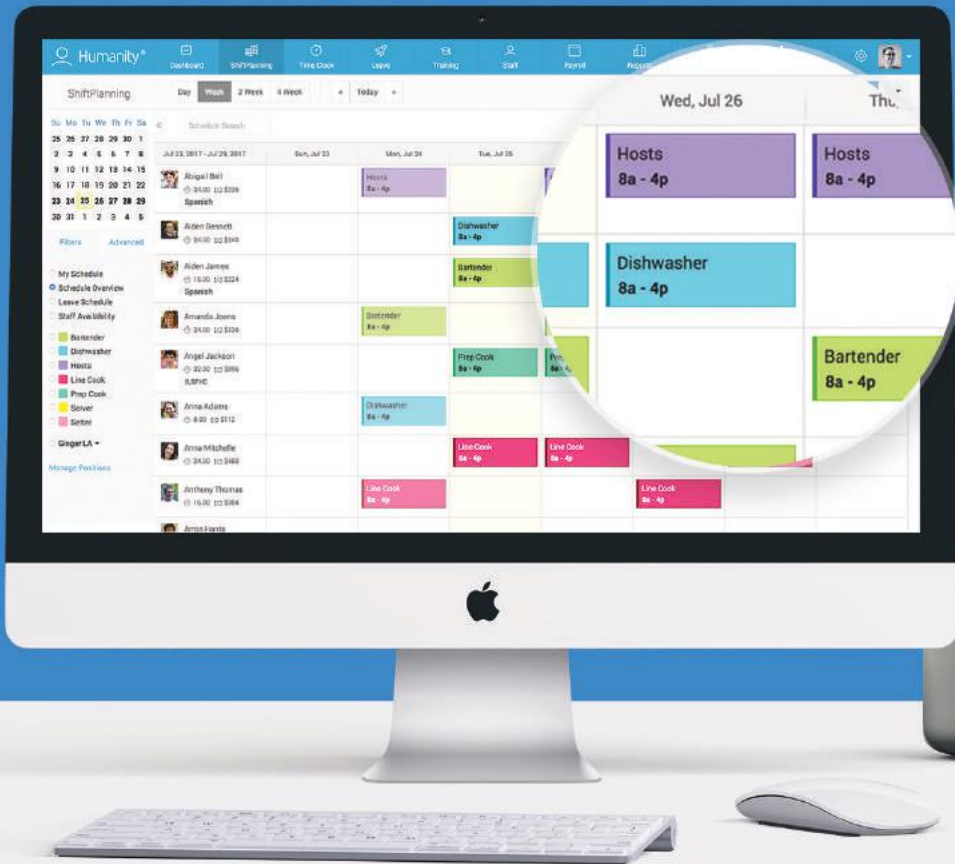

Humanity is an incredibly versatile and intuitive workforce management software solution that allows managers to keep track of every aspect of their businesses using one, holistic platform.

On top of its award-winning online staff scheduling solutions, managers can use Humanity to track staff time and attendance, manage vacations, create and export timesheets for payroll and much more.

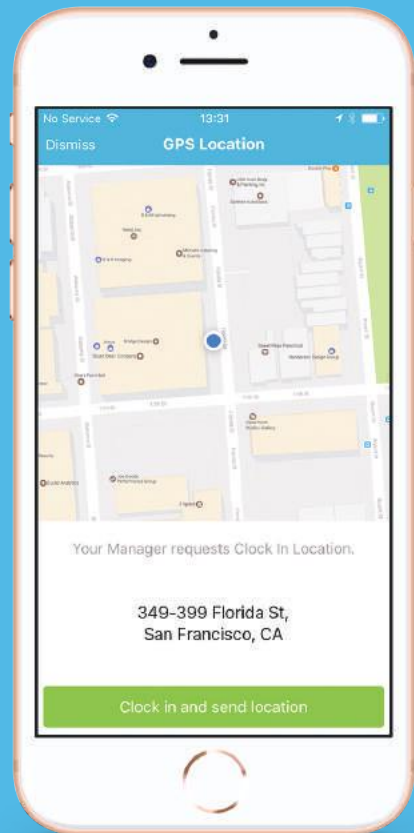

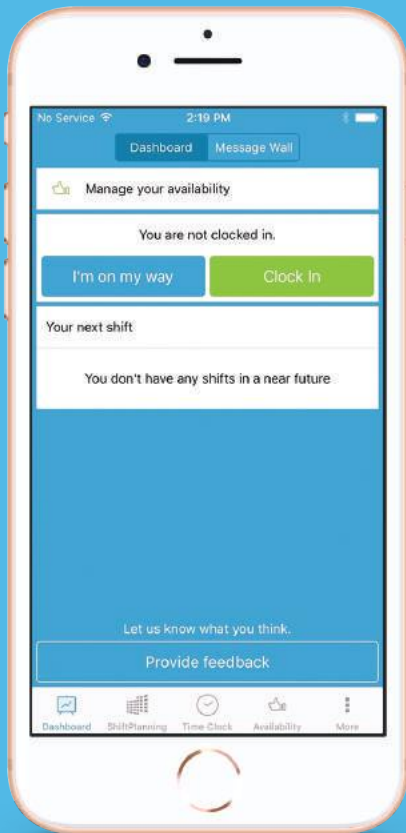

ShiftPlanning

The central module of the Humanity platform. Create conflict-free schedules in minutes and ensure that your staff are always up to date with the latest schedule through shift reminders via email and mobile notifications.

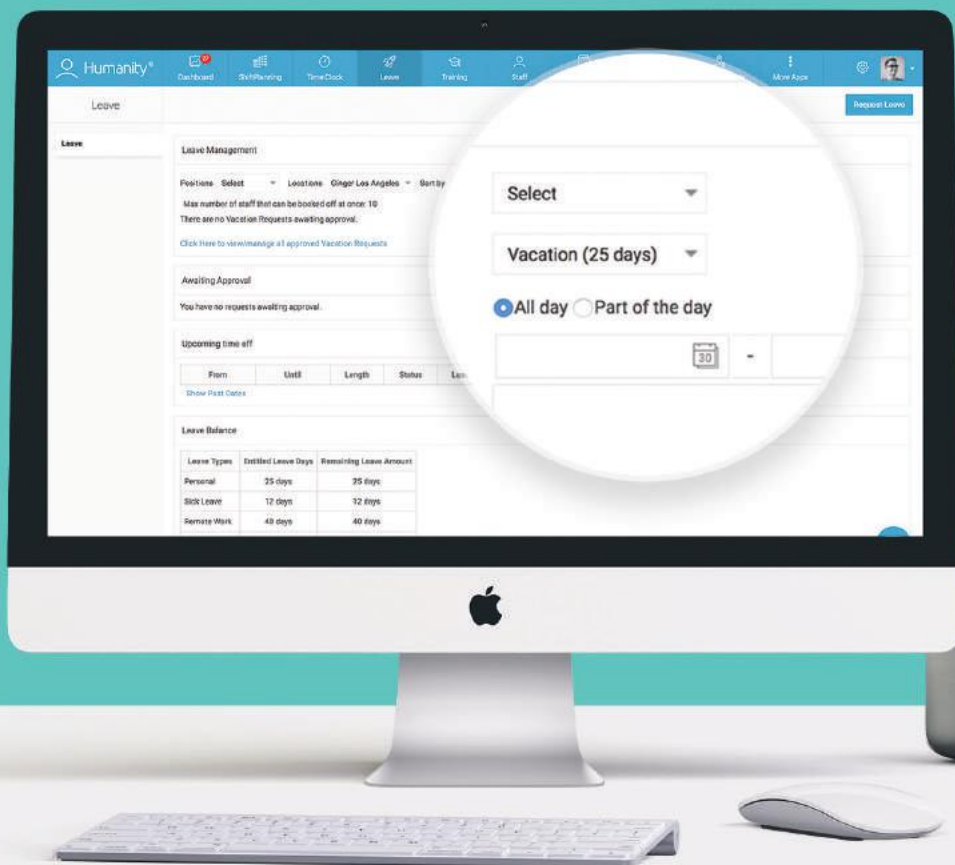

Time Clock

Replace expensive stand-alone hardware with a web-based time clock. Streamline the process of exporting your timesheets to payroll and encourage better employee attendance across the board. Create terminals to make sure your employees are clocking in and out from the right locations.

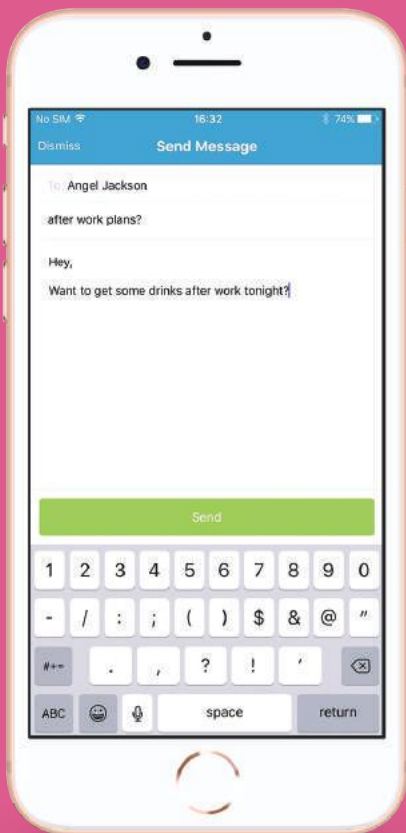

Leave Management

Streamline leave management and increase employee autonomy by allowing staff to submit for time off independently. Create custom leave types and make sure that everyone knows who is taking time off and when.

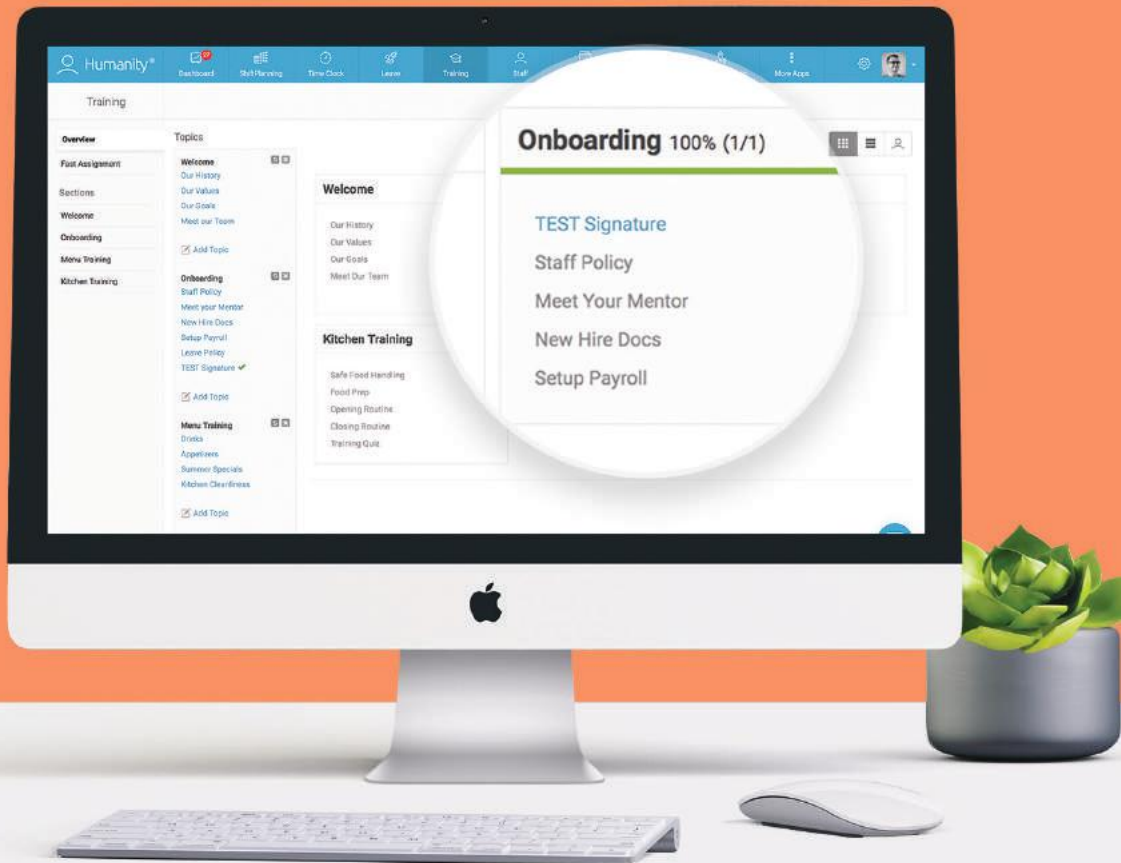

Communication

Centralize and mobilize staff communication. Communicate securely with company-wide announcements or private chats with employees. Why use third party chat applications for work communication when you don't have to?

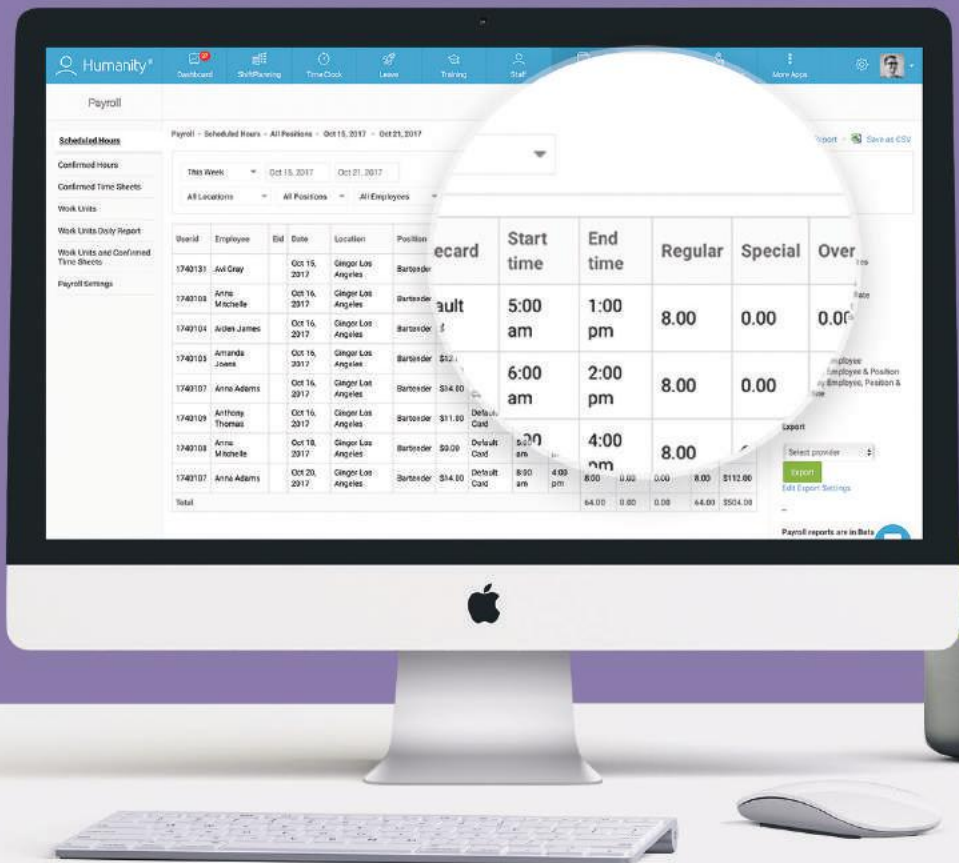

Training

Facilitate the onboarding of new hires or ongoing training and development of existing staff with our easy-to-use training module. Add content, create tests, upload documents and keep track of the progress employees are making in completing their assignments.

Payroll

Create and export perfect timesheets ready for payroll with the click of a button. Integrate your timesheet data seamlessly with your third-party payroll provider of choice. Payroll supports historical data footprints, which means all of your payroll runs from the past will be saved in the system.

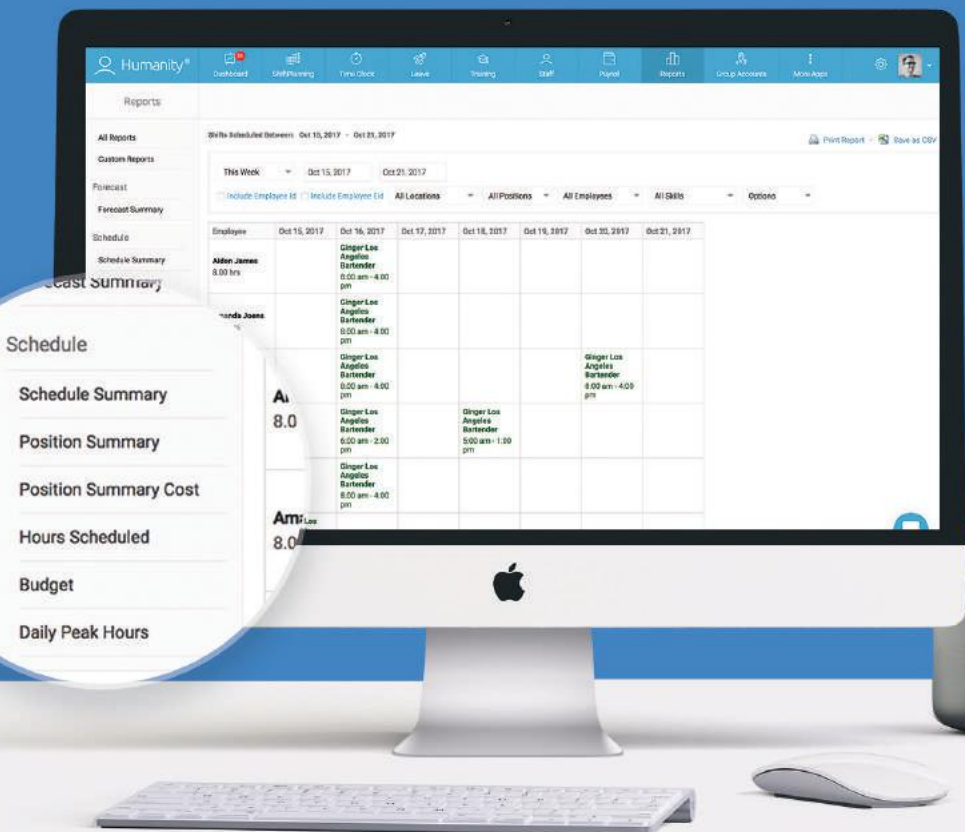

Forecast

Import external KPIs into the Humanity platform to forecast future scheduling needs and create optimal, data-driven schedules for your staff. See graphical representations of your scheduling needs as you schedule to ensure that you're never over or understaffed again.

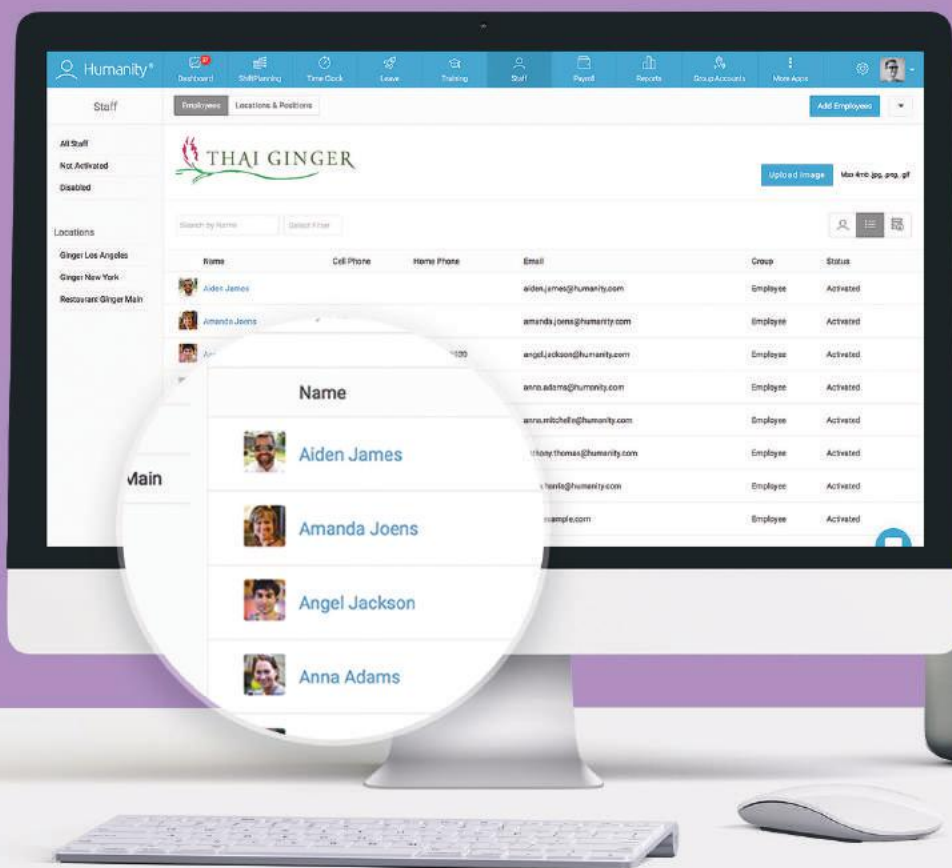

Reports

Reports gives you the ability to correlate and analyze your most vital staff management data by creating detailed, custom reports. All reports are dynamic, allowing you to see the latest, up-to-the-minute scheduling, time and attendance, budgeting and payroll data at all times.

Staff

Your people are the most important part of your business. The staff module allows you to manage their identities, contact information, positions and locations, as well as the hierarchy and roles within your workplace.

Integrations

Humanity also plays nice with everyone else's software. We offer open APIs as well as an integration cloud connector to help you sync Humanity with other software. Our ecosystem of integration partners is constantly growing.

Humanity Integrations Simplify Everything

Mobile Apps

Mobilize yourself and your workforce with apps that give you the information you need to organize your staff even when you're not in the office. Allow employees to check their schedules, clocking in and out of shifts, requesting shift trades or leaves on the go.

Enterprise Options

While we love helping small business owners schedule their teams better, Humanity also offers advanced solutions for optimizing and automating even the most complex and demanding staff scheduling and workforce management needs of large corporations.
