cloud-based time and attendance

Time Tracking That Gets Results

stratustime®

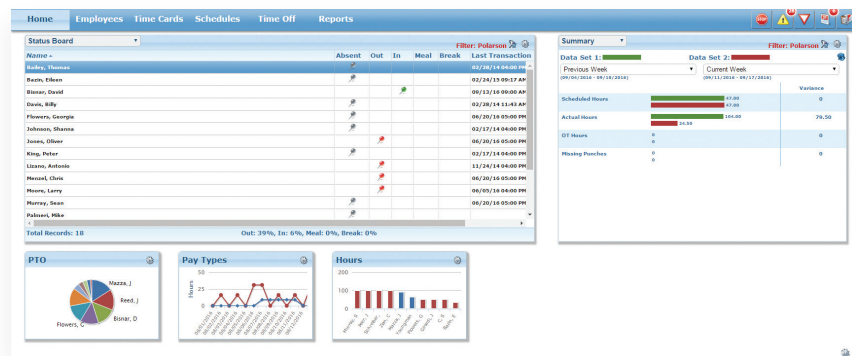

Support Your Strategy

Are you spending valuable time tracking employee hours with outdated, inefficient technology? If so, you could be compromising the long-term success of your business. By implementing a time and attendance solution, you can save time, improve payroll accuracy, and ultimately save money.

Residing in the cloud for real-time data access, **stratus**time gives you visibility and control over your labor costs, which can help drive tangible increases in savings, output, and performance.

Manager Dashboards

Equip managers and supervisors with real-time data, analytics, and key performance indicator tracking. Analyze performance trends and identify patterns to help predict operational needs.

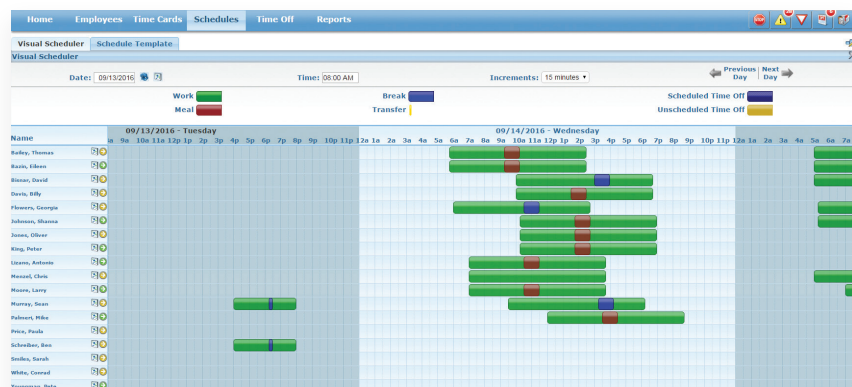

Employee Dashboard

Empower employees with easy tools to record time, transfer departments, check schedules, and view time-off balances and requests.

Drag-and-Drop Visual Scheduling

Work quickly and efficiently with color-coded drag-and-drop scheduling. Breaks and meals can be added based on your company pay policies.

Record Time Accurately

Time Recording Options

Offer employees punch-in options that fit your business, including touch-screen HID and biometric clocks, a tablet kiosk app, web punch, and an interactive voice response system.

Go Mobile

stratustime App

Employees can punch in, punch out, or transfer between assignments via their mobile devices with an easy-to-use application.

Geolocation

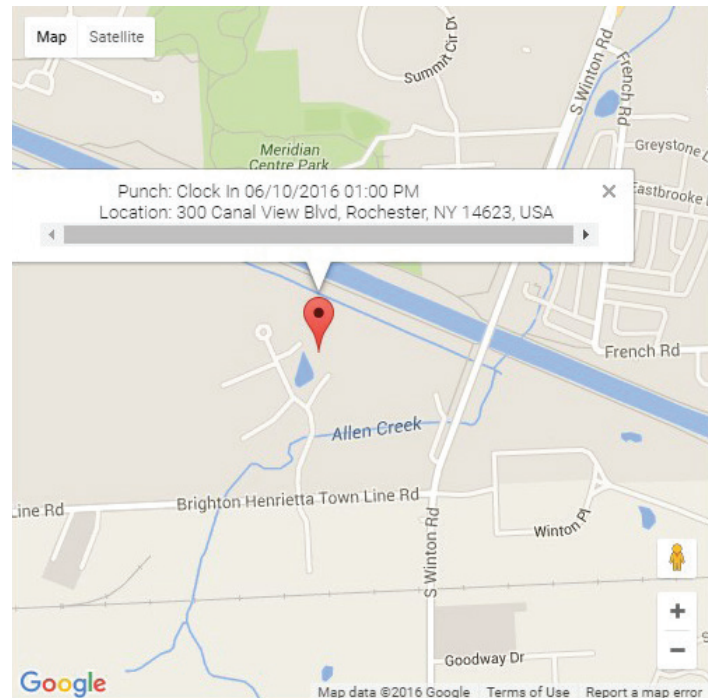

Receive confirmation on where your mobile employees punch in or out. With geolocation, an employee's geographic position is recorded with their punch, even from a remote location. When clicked, the pin icon in their time card entry displays a map showing when and where they punched.

Geofencing

Prevent employees from punching in or out outside of designated areas.

Mobile Website

Go beyond mobile punch with powerful features from your tablet or smartphone. While employees can use the mobile site to clock in and out, employers can view schedules, approve and adjust time cards, manage time-off requests, review an activity summary on the account, and process mass edits for quick and efficient updates.

Create Efficiencies

Time-Off Management

Easily review, submit, and approve time-off requests with calendar sharing. View multiple schedules simultaneously to ensure appropriate staffing.

Time Card Management

View and edit time cards with just a few clicks.

Job Costing and Labor Distribution

Determine how resources and time are spent with greater precision. Enable employees to clock in under their applicable labor assignments to keep hours and project costs correctly allocated.

Proactive Alert Messaging

Send and receive timely notifications based on automated custom triggers.

Additional Options*

Forecasting

Pay employees for a full pay period before it actually ends. You can predict how many hours employees will work based on their schedules or average hours worked, and then easily reconcile the difference in actual hours worked with the next pay period.

Leave Tracking

Stay up-to-date on employees' leave balances and receive automated alerts when they're scheduled to return to work. Plus, you can manage time-off accruals while employees are out of the office.

Employee Points Tracking

Clearly document attendance infractions based on your company's policies and easily notify employees of issues through automated warning messages.

Budgeting

Keep tabs on your staffing budget in real time. As you assign employees to shifts, a dynamic chart displays whether your budget is over, under, or right on target. Live feedback means you can make cost-saving changes on the fly.

Advanced Scheduling

View schedules on a weekly basis, schedule shifts by organizational unit or employee group, set capacity requirements per shift, assign employees to shifts, and review scheduled shift capacities with color-coded representation.

With the module's Shift Swapping feature, you'll be able to provide access for your employees to view other employee schedules, post their scheduled shifts, and request or pick up available shifts. You'll also be able to access employee and manager actions 24/7 on your computer or mobile device, and have the ability to give the manager control or fully automate shift requests.
